

# Make a Splash as a King County Blue Team!

## BLUE TEAM PROJECT IDEAS:

Conduct water tests on local water bodies and send data to King County Water Monitoring scientists

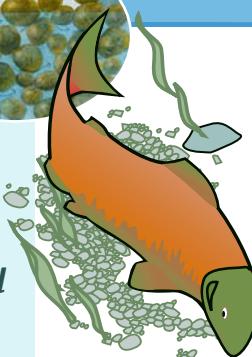

Take the Water-Saving challenge and find ways to conserve groundwater use in your classroom

Restore a wetland

Plant a native garden

Create a brochure or video to teach others about groundwater conservation

Start a campaign at your school to increase groundwater awareness.

## Teachers!

King County is using kid power to help care for one of our most precious natural resources—groundwater! Go to [www.naturevision.org](http://www.naturevision.org) and sign your class up to be a King County Blue Team! Kids get assistance from a King County Water Specialist to complete a groundwater-action project on or near your school grounds.

## What Is A Blue Team?

A Blue Team is a group of King County kids from a classroom, a neighborhood group, or a scout or camp group who commit to taking on and completing groundwater-action project in King County. The group can design a project or select one from the list below. The project must be completed within the school year. Blue Teams receive up to 4 hours of expert help from a water specialist. That means help in planning, preparing for, and executing your project. Blue teams receive recognition upon completion of the project and are sent a prize for each student. Just choose an idea and we will help with the rest!

## How To Register:

Go to [www.naturevision.org](http://www.naturevision.org), click on Blue Team Registration, and fax in the form. Nature Vision, Inc. is the non-profit organization coordinating the Blue Team program for the Redmond-Bear Creek Groundwater Protection Committee. Within one week you will receive a phone call from a water specialist to talk about your idea and jump start your project!
